Welcome and Overview

We the faculty and staff of the Ecology, Evolution and Behavior Graduate Studies Committee wish to welcome you to the EEB Graduate Program. We look forwards to working with you and supporting your progress towards a graduate degree in EEB. We encourage you to actively use this handbook throughout your studies as it is a summary of the university, department and graduate program policies and procedures. For more complete information, please refer to our website at https://cns.utexas.edu/eeb-graduate-program/.

Your Responsibilities

You are responsible for understanding the rules and policies that govern your academic degree. Use all resources available to you and plan well in advance to meet necessary deadlines. Please feel free to ask our Graduate Coordinator about any deadlines, or issues you may have questions about.

The Graduate School website https://gradschool.utexas.edu/ is an excellent resource for information on degree requirements, as well as policies for applying to graduate and deadlines for defenses, thesis and dissertation submissions.

The College of Natural Sciences website for Graduate Education https://cns.utexas.edu/graduate-education/ is another great resource for graduate students. It covers college policies, graduate courses offered throughout all CNS graduate programs, as well as, professional development and career support options.

Graduate program Administrative Structure

The Graduate Studies Committee (GSC)

The Graduate Studies Committee consists of all faculty in the Department of Integrative Biology, as well as faculty from other departments whose interests overlap substantially with the EEB GSC. The GSC sets the policies concerning the graduate program curriculum and academic requirements within the guidelines of the Graduate School and the College of Natural Sciences.
GSC Chair (Dr. David Hillis, dhillis@austin.utexas.edu)
The GSC Chair is a faculty member who oversees the EEB GSC and oversees all GSC meetings. The chair also implements GSC policy regarding curriculum, and serves as a liaison to the Graduate School and the College of Natural Sciences.

Graduate Advisor (Dr. Molly Cummings, mcummings@austin.utexas.edu)
The Graduate Advisor is a faculty member of the EEB GSC who advises graduate students and monitors their progress towards degree. The advisor also serves as a liaison to the Graduate School and the College of Natural Sciences.

Graduate Coordinator (Tamra Rogers, tamra@austin.utexas.edu)
The Graduate Coordinator is the person who actually does most of the work involved in running the program. The coordinator keeps track and processes funding sources, student records, and ensures forms and procedures are processed in a correct and timely manner. Questions concerning procedures should be addressed to the Graduate Coordinator, who will consult with the Graduate Advisor, College of Natural Sciences, or the Graduate School, as necessary.

Admissions Chair (Dr. Misha Matz, matz@utexas.edu)
The Admissions Chair oversees the process of recruiting, evaluating, and admitting applicants to the EEB graduate program.

GSC Faculty Members
Faculty members on the EEB Graduate Studies Committee can mentor EEB graduate students, advise and vote on EEB GSC policies, serve on the EEB GSC subcommittees and dissertation committees. Our current list of EEB GSC members can be found on our website at https://cns.utexas.edu/component/cobalt/items/1-directory?Itemid=1745.

Student Advising
Each student in EEB receives a personalized education, under the supervision of a team of faculty.

Major Professor(s)
All students have a faculty member appointed as their major professor (PI) before arriving at UT. The major professor, or professors if co-advised, is responsible for providing the student with academic guidance regarding coursework, research and the
access needed to the facilities and resources to conduct their research. All major PI’s must be on the EEB GSC, however, co-advisors do not have to be GSC members, or even affiliated with the university.

It is possible to change major professor(s) or add a co-advisor if during your work you find your interests fit more closely with another faculty member. If any changes are made regarding your major professor(s), you should notify the Graduate Coordinator about the change as soon as possible.

First year students may opt to intern in two or three labs during their first year with those faculty who approve for students to go this route. These internships are not required, but are available on an opt-in basis. Internships allow the student to learn a variety of research perspectives and methods, and to ensure that they settle in a lab that best suits their academic interests. Internships may be a simple as attending lab meetings, doing a directed reading project with a professor, or may entail field or lab work. If you and a professor(s) decide on this option, you must notify the Graduate Advisor and Coordinator immediately.

First Year Advisory Committee

During the fall semester, all first-year students are required to develop an academic plan of work including coursework expectations. This is developed in consultation with the PI, and approved by the Graduate Advisor. The Graduate Coordinator will provide you with the form. Students may also discuss their plan with any member of the First Year Guidance Committee.

First Year Guidance Committee (Faculty)

In addition to their Major Professor, students may find it useful to (optionally) consult with other faculty to discuss academic concerns or questions (issues involving research, coursework, work-life balance, mentor-student interactions, etc). Any faculty should be available to students for such discussions, but the EEB GSC Chair designates a group of four faculty (the Chair, the Graduate Advisor, plus two others) who are official points of contact for first year student questions or concerns. You may contact them individually or as a group with anything you need help with.

First Year Guidance Committee (Graduate Students)

To help navigate the first year and course choices, EEB has appointed a committee of senior graduate students who are willing to discuss graduate course choices with first year students. The Student First Year Guidance Committee should meet with all the first-year students, as a group, to discuss recommendations for courses. It is appropriate for the senior students to discuss their own experiences with particular courses or instructors. Faculty are not allowed to attend this meeting.

Student Mentors
Each first-year student will be assigned, at random, a senior graduate student mentor who is not from their own lab group. They should meet roughly once per month to discuss student progress, concerns, or any other issues that can help the first-year student settle into life as an EEB graduate student.

**Diversity & Inclusivity Committee**

This committee’s two main efforts are (1) to address concerns or complaints about isolation, bias, harassment, mentor-student conflict, or any other inclusivity-related challenge, and (2) to assist in the support of prospective, incoming, and current graduate students through mentorship and community-building. All graduate students are encouraged to speak with one or more committee members, the GSC Chair, Graduate Advisor, or the Graduate Coordinator about any concerns they may have. We will coordinate with students on how to proceed, and will hold all their concerns in confidence. Further information, as well as a list of all current faculty and graduate student representatives serving on this committee are listed on our website at https://cns.utexas.edu/eeb-graduate-program/diversity.

---

**EEB Annual Assessment**

All students are expected to make reasonable progress toward their degree. Beginning the student’s second year, the student must meet with their PI and complete the annual assessment. Once in candidacy, the student will continue to meet annually with their PI, along with any committee member’s that are available. It is the student’s responsibility to set up this yearly meeting and complete the Annual Assessment by November 1st each year. Once complete, the assessment must be forwarded to the Graduate Coordinator who will then send copies of the annual assessment to the PI and the current committee members.

The reports are used by the EEB Graduate Student Evaluation Committee in its annual review of graduate student progress and is important evidence when the Committee awards merit fellowships, research and travel funds. Flagrant or repeated violation of this expectation may affect students’ eligibility for TA or GRA appointments or fellowships. A formal meeting of the Dissertation Committee can be requested at any time by the student, or any member of the Dissertation Committee, but this annual meeting is required every fall by the EEB Graduate Program.

---

**PhD Curriculum Requirements**
The Graduate School requires 30 credit-hours of graduate-level coursework to complete a Ph.D. This includes classes, seminar courses, research and dissertation hours. The Graduate School policy is students must receive a minimum grade of B- or higher to receive credit towards fulfilling degree requirements. EEB’s policy is students are required to fulfill the following coursework and training requirements.

**BIO 389D – Subjects & Skills in Biological Sciences**

This core course is required for all first-semester students in EEB and is taken with the PB Cohort.

**Three Additional Lecture Classes**

In addition to the Subjects & Skills course (BIO 389D), each EEB student must take a minimum of three additional graduate-level lecture courses. Lecture courses are defined as courses that meet a minimum of two hours per week, including some instructor-led content (e.g., not just student-led reading discussion), and involve both reading and graded assignments leading to a letter grade.

At least two of these courses must be graduate level EEB courses, taught by an EEB GSC member. At least one of these courses must meet the Quantitative requirement (see below).

**Quantitative Skills Course**

Each EEB student must take one course that is primarily devoted to quantitative skills. Courses that satisfy this requirement may include non-EEB courses in areas such as mathematics, statistics, computer programming, bioinformatics, GIS, or EEB courses with heavy computational or mathematical training. The operational definition of a quantitative course, for the purpose of this requirement, is that the course should include multiple graded assignments in which students must apply learned quantitative skills to a task, including but not limited to mathematical operations and/or programming. Also, a majority (>50%) of class time should be devoted to teaching or exercising the quantitative skills. In order to count as part of your Program of Work, the course must be taken for a letter grade.

**Seminar Courses**

To graduate, students are required to participate in seminar classes. The requirement is that the student must register once for BIO 384L (see below) and take three additional seminar classes, for a total of 4 seminars. This requirement can be fulfilled by registering for and regularly attending departmental lecture seminar series, or by registering for and participating in a reading seminar. Students may also count lecture classes towards this requirement (beyond the Subjects & Skills and three additional lecture classes).
EEB expects that graduate students will regularly attend lectures given in departmental seminar series. EEB students should, at a minimum, regularly attend the:

- **Population Biology (BIO 384L)**. Thursday’s 2-3 PM. Lectures given by local faculty, students, postdocs, and visitors. All EEB student must register for Issues in Population Biology for one semester.

- **Integrative Biology and Plant Biology Seminar Series**. Monday’s 3-4 PM. Weekly departmental seminars.

Additional lecture seminar series that may be of interest to EEB students include:

- **Seminar Brain, Behavior, and Evolution (BIO 384K.45)** Fridays 12-1. Lectures mostly given by local researchers, focusing on animal behavior, neurobiology, physiology, and related topics.

- **Molecular Biological Sciences**. Wednesdays 4-5. Seminar series for the MBS Department.

- **Institute Cell & Molecular Biology** Thursdays 4-5. Seminar series for ICMB

**Course Offerings**

Three ‘Fundamentals’ graduate lecture courses will be offered every year. These classes provide graduate-level coverage of current knowledge in Evolution, Ecology, and Behavior. Each class is lecture-based, and covers a diverse range of topics with heavy reliance on reading the primary literature to give students grounding in both classic papers and current research areas.

1) Fundamentals of Evolution - BIO 390C
2) Fundamentals of Ecology – BIO 390E
3) Fundamentals of Integrative Animal Behavior – BIO 390D

The following graduate lecture courses will be offered at least every few years, as faculty are available. Asterisks indicate courses that may satisfy the quantitative course requirement.

**Advanced Study and Research / Dissertation Hours**
Students who have not yet advanced to candidacy should take BIO 182, 282, 382, 682 or 982 (Advanced Study and Research) as part of their course load. This provides credit in recognition of ongoing preparation to do research, but does not fulfill the lecture or seminar course requirements listed above. After admission to candidacy, students should register for BIO 399W, 699W, or 999W through the semester they graduate. In all cases, the first digit 3, 6, or 9 is the number of hours the course is worth, so use the one that brings your registration up to the full-time course load. If you end up with anything other than 9 hours in the long semesters, or 3 in the summer, please contact the Graduate Coordinator to help you figure out the best way to register to keep you at full-time status.

Teaching Assistant Experience

Students are required to hold a Teaching Assistant position for a minimum of two semesters during the fall or spring. Prior to holding a Teaching Assistant position, the student must take a short training workshop offered prior to the start of their first semester to TA.

Oral Presentations

Beginning second year, all EEB graduate student are required to present a talk on their research at least once a year. Qualifying events include lectures in public venues such as the Population Biology Seminar Series, the Physiology & Behavior series, the annual student Symposium, seminar series at other universities or departments, or lectures at conferences. Lab meeting presentations do not satisfy this requirement because they are not public. Lectures should be a minimum of 15 minutes to qualify. Consequently, students may split a one-hour seminar time-slot into two or three presentations by several EEB students.

Summary of Curriculum Requirements

<td>Preferred before candidacy</td>
</tr>
<tr>
<td>Research credit (BIO 382, 682, 982)</td>
<td>At least 1</td>
<td>Every semester until admission to candidacy.</td>
</tr>
</tbody>
</table>
Dissertation credit (BIO 399W, 699W, 999W) | At least 2 | Every semester after admission to candidacy.
Seminar courses (or additional lecture courses) | At least 3 | Any semester before graduation

Students who already have a master’s degree may appeal to the Graduate Advisor to waive a particular course requirement. Typically, those that are approved, are approved for replacing a seminar course requirement. Please see the Graduate Coordinator about the waiver request. Approval of a waiver is not guaranteed.

Qualifying Exam

In consultation with the Major Professor and approval by the Graduate Advisor, the student will choose a committee that will administer the Qualifying Exam. The committee must be chosen during the second-long semester (spring of the first year). The student and Major Professor(s) propose a list of four or five faculty to serve on the committee, which will be approved by the Graduate Advisor. The student’s PI is one of the 4-5 members of the committee. At least three committee members must be EEB GSC faculty members. For a committee of 4, at least one member of the Dissertation Committee must be from outside the EEB GSC. This means the outside committee member cannot have any affiliation with the EEB GSC. For the committee of 5, the outside committee member can serve on the EEB GSC, but the person considered “outside” must be affiliated with another GSC. If the outside committee member is from another university or is not an official GSC member with the Graduate School, they will be required to submit a CV. One Senior Lecturer can serve on the Qualifying committee with the approval of the Graduate Advisor.

A student who wishes to schedule a Qualifying Exam must complete the Qualifying Exam application and prepare the Program of Work for Doctoral Degree. Contact the Graduate Coordinator for both of these forms. The Program of Work is a list of the courses completed, ongoing, or proposed that are to be counted toward the Ph.D. Both forms are available from the Graduate Coordinator. The Program of Work includes an approximate thesis title (in order to give the GSC an indication of the student’s interests), but a research abstract is not required at this time. A draft of the program of work should be approved by the Graduate Advisor at least two weeks before the Qualifying Exam is scheduled to occur. The draft will then be distributed by the Graduate Coordinator to the entire GSC for comments and recommendations.

The Qualifying Exam Committee described above will administer the exam. The Graduate Advisor will choose the chairman of the Qualifying Exam Committee from one of the four or five members who is not the student’s PI(s).

Purpose
The purpose of Qualifying Exam is to assess whether students have the intellectual capacity, maturity, and background knowledge to conduct research. Specifically, the exam is supposed to:

- evaluate student ability to identify and justify interesting research questions, including formulating appropriate hypotheses,
- assess student ability to place research questions into context of current literature,
- assess student ability to plan strategies to answer research questions,
- evaluate the student’s ability to communicate their questions and knowledge in written and oral form,
- identify gaps in student knowledge and to recommend rectification, and
- provide an incentive for student to hone skills and knowledge necessary to proceed with research in their discipline. Assessment of more general subject-matter knowledge is achieved by grades from courses.

**Prerequisites**

Prior to taking the Qualifying Exam, students should have completed any courses that the First Year Guidance Committee requires the student to take before the exam. The Guidance Committee may also require that the student take a course but not stipulate that completion of the course precede the Exam (for instance, when the course is offered irregularly).

**Scheduling**

It is the student's responsibility to set up a date, place and time for the exam when all the committee members can meet. You should schedule a three-hour time slot, however, if you would like extra time to set up, be sure to allow additional time when reserving the room.

The oral exam should take place by the end of the student's second year (fourth long semester or the subsequent summer). Students seeking to take their exam in their third year must petition the Graduate Advisor to approve the delay. Students who have not completed the Qualifying Exam before the end of their fifth long semester risk being rerouted by their committee or the GSC to the Master’s degree track.

**Qualifying Exam procedure**

1) Students identify a committee of four or five faculty in the spring of their first year. Committee membership may change up until the exam, at which point the committee becomes the dissertation committee.
2) To clarify expectations for the exam, in May of their first year each student will meet with their committee (individually) to discuss research interests, plans, and relevant training. Based on the conversation, the faculty should suggest coursework, workshops, and independent reading assignments, to help train the student on agreed-upon topics broadly relevant to their interests. This represents a plan for the student’s studies during their second year, and defines the topics that may be covered during the general knowledge portion of the exam. To formalize this plan, each student should establish a cloud document (e.g., a Google Doc) where each faculty lists their expectations, and can see other faculty’s assignments for the student. These recommendations are written down, and serve to define the scope of what is expected of the student in the general knowledge part of their exam.

3) Students take a single oral exam by the end of their second year (4th semester), but may appeal to take it as late as the fall of their third year (5th semester).

4) At least 4 weeks before the exam, students submit a 10-page research proposal to their committee. The proposal will typically discuss:
   a. A clear description of the existing literature on a topic.
   b. An open question, and a clear explanation of why this is worth answering.
   c. Any preliminary data to motivate the question, or demonstrate that the planned work is feasible.
   d. A description of the research methods, and subsequent data analysis and interpretation.
   e. How will the research be partitioned into chapters and eventual publications? Three chapters, corresponding to journal articles, is a common baseline expectation.
   f. A time-line for completion.
   g. A description of the resources required to do the work, and how those resources will (hopefully) be acquired.

The proposal should be in 11- or 12-point font with 1-inch margins. References do not count against the page limit.

If the student does not submit the proposal on time, the exam must be rescheduled to allow the committee sufficient time to give helpful feedback before the exam takes place.

5) At least 2 weeks before the exam, faculty must provide written feedback and a letter grade on the proposal. Faculty may provide comments as a written review, or as
track-changes on a document. Students are encouraged to set up a system where faculty can see everyone’s comments.

a. This step provides time for the student to think about comments and adjust their research design before the exam itself. The student should provide a written description of any substantive changes to the research plan to the faculty in advance of the exam.

b. The written comments might also include additional details about subjects that the student should be prepared to answer in the general knowledge portion of the exam the oral exam.

c. If any faculty provides a grade of C- or below, the faculty must discuss to decide whether to proceed with the oral exam, or to delay until an improved proposal is available.

d. Students go through a lot of trouble to write their proposals, and deserve written feedback on the proposals in return. The feedback 2 weeks before the exam should also help alleviate stress concerning the exam itself.

6) A committee member, other than the advisor, is assigned responsibility as Chair for the exam. The Chair is responsible for strictly enforcing the exam rules, such as format and timing.

a. This starts with a brief discussion among the faculty (the student steps out of the room) about the students’ progress and prospects for further work. At this stage the faculty mentor(s) should provide input regarding student performance. The Chair should briefly summarize the format and goals to remind committee members of the rules.

b. The first portion of the exam (minimum 1-hour duration) is general knowledge questions about topics settled upon as described in (2) above. The faculty mentor(s) do not ask questions or comment during this portion of the exam.

c. In the second portion (minimum 1-hour duration), faculty ask questions about the specific research plan, and provide feedback on research feasibility. They may also evaluate whether the student has sufficient knowledge and critical thinking skills to pursue the work effectively. The student should prepare a brief talk (5 minutes) given at the start of this 1.5 hours, to help guide the discussion and remind faculty about the content of the proposal they have previously read. The mentor(s) should take a back-seat to this discussion, but may contribute.

d. The entire exam should not exceed 3 hours, with a break between the two portions. This gives the student time to regroup, and time for the committee to discuss the result, if the student steps out of the room.
e. At the end of the exam, the student leaves the room and the faculty consult about their decisions. Each committee member provides a separate score for the student’s written proposal, general knowledge, and research plan. By weighting these considerations, with feedback from the PI, the committee may opt to:

General Knowledge

1) Pass without conditions. Continue to dissertation proposal.
2) Pass with condition(s) listed below. Continue to dissertation proposal.
3) Pass with condition(s) below. Reschedule dissertation proposal
4) Re-examination at a later date.
5) Termination of the PhD program.

Dissertation Proposal

1) Admit to candidacy.
2) Pass with condition(s) listed below. Continue on to candidacy
3) Pass with condition(s) below. Rewrite Proposal. Do not admit to candidacy.

In its deliberations, following the exam, the Qualifying Exam Committee may consider not only responses to questions during the exam, but also the successful completion of formal coursework, prior research experience, and other evidence of academic achievement. When the committee has completed its deliberations on the student’s performance and has decided on a recommendation, the student will be invited back before the committee to discuss the results of the examination. Approval of the dissertation proposal should occur no later than the end of fifth long semester in residence, with admission to Candidacy no later than the sixth long semester.

All committee members must sign the Examination Results form. If a committee member is attending virtually, then an email may be sent to the Graduate Coordinator in place of a formal signature. If any additional coursework is required, it should be added to the student’s Program of Work for the Doctoral Degree. All signed forms must be returned to the Graduate Coordinator.

________________________________________

Advance to Candidacy

________________________________________

When the dissertation proposal has been accepted by the committee and the results form has been signed by the student’s committee, you must return the form to the Graduate Coordinator. The GC will send the student the online form to apply for candidacy with the Graduate School. You are not officially in candidacy until the online form has been final approved by the Graduate School.
Students should also check with the Graduate Coordinator during this time to be sure all your degree requirements have been met. Students do not want to get to their defense to realize something was missed.

---

**Dissertation Defense**

The semester the student intends to graduate a Graduate Application must be submitted online with the Graduate School. This application is due fairly early in the semester, so if you think you may defend, go ahead and submit the application. If by chance you don’t defend, or you are still making corrections when the deadline passes, you will just need to apply to graduate again the following semester. It is free to apply to graduate, so you can apply multiple times, if necessary.

The student will meet with their Dissertation Committee within one year prior to the Dissertation Defense to review progress towards completion and get approval of an approximate date for the exam.

When the dissertation is essentially in its final form, it is circulated to the Dissertation Committee. When all members of the committee agree, the final oral exam should be scheduled with the Graduate School by completing the Request for Final Oral form. At this point, all deadlines and paperwork are with the Graduate School, not the EEB Graduate Program.

Following procedures specified by the Graduate School, the student should give copies of the dissertation to all committee members at least four weeks prior to the defense. The Request for Final Oral Examination must be signed by all members of the committee and the Graduate Advisor, then submitted to the Graduate School at least two weeks prior to the exam. No committee member is expected to sign the Request for Final Oral Examination until they have had sufficient time to examine the dissertation.

The oral defense consists of two parts. The first is a public seminar that is open to members of the University and the public at large. Immediately following the seminar, the student meets privately with the Dissertation Committee to answer any questions that the committee members may have. Once all corrections have been made to the dissertation and at least four members of the committee approve, the GSC Chair or PI (GSC Chair representative), may sign the Report of Dissertation Committee form to notify the Graduate School Dean of successful completion of the defense and all degree requirements.

---

**Master of Arts Program**
The Graduate School has two programs leading to a Master of Arts (MA) Degree that are applicable to Ecology, Evolution and Behavior and is expected to be completed within two to three years.

- **MA with Thesis.** This is the usual degree taken in this program. Six hours of "Thesis" are taken as part of the 30 hours of coursework. A written thesis is presented and read by two members of the faculty, your advisor and one other member.

- **MA with Report.** Three hours of “Report” are taken as part of the 30 hours of coursework. A report instead of a thesis is written. This report is based on work done in one of the courses. The report is read and signed by two members of the faculty, your advisor and one other member.

**Course Requirements**

- For the Thesis option, 24 hours of coursework, plus BIO 698A & 698B Thesis (taken sequentially) which counts for 6 hours for a total of 30 hours. For a MA with Report option, BIO 398R must be taken and counts for 3 hours, in addition to 27 hours of coursework, for a total of 30 hours.

- A minimum of 15 hours of coursework in Ecology, Evolution and Behavior is required. EEB courses are defined as courses taught or co-taught by a member of the EEB GSC. In rare cases, a course taught by a faculty member who is not a member of the EEB GSC may be acceptable but must be approved by the Graduate Advisor. Research courses (BIO 182, 282, 382, etc.) cannot be used to fill this requirement. The student can use no more than one conference course to fulfill the 15-hour requirement.

- As part of the 15 hours of coursework, the student must take three hours of BIO 389D Subjects & Skills in Biological Sciences. This is a core course for first-semester students in the EEB graduate program and is co-taught with the PB first year students.

- An additional six hours of work acceptable for graduate credit must be outside the major area of EEB.

- No more than 9 hours of senior level college courses may be counted toward the MA degree, and no more than 6 of these can be in EEB or the minor area. Courses with a middle digit of 8 or 9 should be chosen where possible.

- No more than six hours of Credit/No Credit courses can be counted. Approval of the Graduate Advisor is required prior to registration for a Credit/No Credit course.

**Program of Work**
The semester the student intends to graduate, an online graduate application and Program of Work must be submitted. You should contact the Graduate Coordinator to submit the Program of Work online. Once complete, you may then submit the graduation application.

**Thesis Defense**

Your thesis must be read by your Supervising Professor and one other faculty member. The Reader does not have to be on the EEB GSC, nor do they have to be a faculty member, but they must have the PhD credentials to evaluate your Thesis properly.

**Registration**

In general, students must be enrolled for classes whenever they are receiving services from The University, such as course instruction, faculty interaction, employment, fellowship or training grant stipends. Please read the following section carefully and check with the graduate coordinator if you have any questions regarding course load requirements.

**Full-Time Registration**

In most cases, all EEB students must be enrolled full-time during the fall and spring semesters. Since we guarantee support for the first five years, you must be registered full-time, which is 9-hours in the long semester and 3-hours in the summer. In some cases, students do not have to be registered in summer. For these few exceptions, the Graduate Coordinator will let those students know. If it isn’t clear at the time of summer registration, then go ahead and register. Registration can always zap later when not paid, but if the student misses the registration deadline, a late fee will be assigned and the student will have to pay.

Regardless of which semester it is, the university will not pay more than the full-time cost for registration. If you are going over 9 hours in the long semester, or 3 hours in the summer, contact your Graduate Coordinator to see how your schedule can be adjusted to bring your back down to the full-time status, otherwise, the difference will be at the student’s expense.

**Tuition Waivers**

Employment as a TA or GRA qualifies non-Texas residents to receive resident tuition. The waiver is requested online and is applied directly to your fee bill. You will need to do this every semester you are appointed as a TA or GRA.
For those who are on fellowship, please DO NOT fill out the online tuition waiver. The Graduate Coordinator will take care of submitting the forms for your waiver, as those are processed differently. Please contact the Graduate Coordinator if you are not sure which type of tuition waiver you need.

**Tuition Bill**

Between the University, CNS and the Department, tuition is covered in full for the first 5-years. The payments usually happen in stages, as different accounts and departments cover different parts of the tuition bill. If you owe additional fees that are not covered under the regular tuition and required fees, then you will need to pay the remaining balance once the University has applied all other payments. These fees include the $10.00 General Deposit for first year students. Since students can request reimbursement for this fee after graduation, the university cannot cover it. Other examples of additional fees are sports packages and late fees.

**Confirming Registration**

All students must confirm their tuition bill after all payments are applied or it will be cancelled. To confirm your registration, go to the tuition payment website and click the “CONFIRM” button. The Graduate Coordinator will send you a notice when it is time to confirm, but if you happen to log on and notice, please go ahead and confirm. If your tuition bill is NOT confirmed by the 5:00 pm deadline, then your registration will zap, and you will be charged a late fee when your reregister. In this case, the student is responsible for covering any late fees accrued.

**Continuous Registration**

The Graduate School requires all students to be continuously enrolled for at least three hours for all long semesters (Spring and Fall) until completion of the degree. Students who need to take a medical leave of absence during a long semester, must petition the Graduate School. The Graduate Coordinator will be able to help you with the petition.

**Add/Drop or Credit/No Credit**

Students may add and/or drop courses without penalty during the add/drop period, which is the 12th class day during long semesters and the 4th class day in summer. After that date students must petition the Graduate School, which petitions of this nature are rarely approved. If a student must drop a course after the deadline and the petition letter is approved, the student will have to pay to add a course to keep full-time status due to having a TA/GRA or fellowship. The cost to add a course is about the same cost as summer registration.

For those that can’t drop a course, but need to make a change, may change the grade status to CR/NC until about half-way through the semester. This option will keep the
grade out of the overall GPA, but if it is a course a student needs for credit, it won’t count in the Program of Work.

Academic Appointments and University Fellowships

The primary means of support from the University is through an academic appointment, which are covered by Teaching Assistantships, Graduate Research Assistantships or University fellowship. A student appointed as a 20-hour TA or GRA, or on a fellowship of at least a $1000, qualifies for resident tuition rates.

Teaching Assistantships

Students are considered for these positions by request. Students who hold a TA must reapply each long semester. Once you have requested a TA position, and the count has been turned into The Biology Instructional Office, you are responsible for that position. This means you are not allowed to pull out of the TA without having someone else to replace you. It has been a number of years since we have had a waitlist, so students should never anticipate they can be removed from their TA slot.

Graduate Research Assistantships

Many faculty members have research grants that allow them to appoint students as GRA’s. Students should check with their supervising professors concerning the availability of such appointments before submitting a TA request.

Pay Period for Teaching Assistants and Graduate Research Assistants

TA’s and GRA’s are paid in arrears, so September’s paycheck will pay out on October 1. Appointments are processed according to the semesters, which are broken down as:

- September 1 – January 15
- January 16 – May 31
- June 1 – August 31

Graders

Each semester we have a few grader appointments available through the Biology Instructional Office. Notice of these appointments are made at the beginning of each semester, and all students have an opportunity to request a grader appointment in addition their TA or GRA, as long as the student does not exceed the appointment limit. The maximum number of hours allowed for all TA/GRA appointments is 30 hours. The two exceptions to this rule are:

1) First year students can only be assigned up to 20 hours.
2) International students are only allowed to be assigned for 20 hours.

**University Fellowships**

Each year the Graduate School accepts nominations from each graduate program for Continuing Fellowships, which provide a year-long stipend. To qualify, you must be in candidacy, or have passed your qualifying exam and in the process of applying to candidacy. The EEB Graduate Student Evaluation and Fellowship Committee determines whose name(s) will be submitted to the Graduate School. Nominees for these awards are selected by the Committee based on the strength of their application and on their records of performance.

**Pay Period for Fellowships**

Fellowships paid by the Graduate School are paid in advance, meaning you are paid September 1 for the month of September. These fellowships include some Recruitment Fellowships, Continuing Fellowships, NSF and any other type fellowship paid by Graduate School funds. Be sure to budget for the last month you are on fellowship. When your fellowship ends in August, you will receive your August check August 1, but you will not receive your TA/GRA, or fellowship from other sources for September until October 1, so please budget for this extra month accordingly.

- Grad School fellowship paid for August on August 1
- September’s stipend is paid on October 1, leaving a two-month gap

There is a similar situation for those who go on a fellowship for only the summer. You will receive two stipends on June 1, so hold one of those checks till September 1.

- June 1 – Receive Grad School fellowship for June
- June 1 – Receive TA/GRA and some fellowships for May
- August 1 – receive Grad School fellowship for August
- October 1 – receive stipend for the month of September, leaving a two-month gap

---

**Prestigious Outside Fellowships**

Students with strong GRE scores and grade point averages should apply for federally funded fellowships, such as the NSF Pre-doctoral Fellowship, NRSA fellowships from NIH, Howard Hughes Medical Institute International Student Pre-doctoral Fellowship.

For those with prestigious fellowships, or looking to apply for a fellowship outside UT where the stipend isn’t as high as our stipend is, or the health insurance and/or tuition isn’t fully covered, please let the graduate coordinator know as soon as possible. We
encourage all prestigious fellowships, but we also have to make sure your stipend, tuition and insurance are covered too. If by chance one of the above isn’t fully covered, how these funds will be paid will be determined on a case-by-case basis with the PI.

Graduate School Prestigious Outside Fellowship Supplement

Each spring semester the Graduate School holds a fellowship competition for those who hold a prestigious outside fellowship, typically $15,000 or more. The supplement is a one-time stipend distributed on or around September 1st for a $1000. With this supplement the student may qualify for in-state tuition rates for fall, spring and summer of that academic year. The student may apply for this fellowship each year they hold a qualifying fellowship.

Department Fellowship Competition

Integrative Biology has funds that are allocated competitively to graduate students to help them achieve their career goals. Three types of fellowships are awarded, each with its own objectives and limitations. The fellowship competition is held once a year in the spring semester.

Start Up Grants

These grants are given to students prior to their acceptance into candidacy, usually in their first two years in residence. The objective is to help them collect sufficient data to construct an outstanding thesis proposal. Related to that, a second objective of these grants is to train students to compete successfully for grant money. Startup grants are capped at $2,000 for his/her graduate career.

IB DDIG

These grants are for students who have been accepted into candidacy. The IB DDIG grants are only given to students whose Major Professor cannot (for any of a variety of reasons) fund the students research expenses. If successful, the money may be used for any purpose that promotes the student’s research. The committee reading the proposals will provide a written critique for students who are not successful so they can enter the next round of competition with a better proposal. The IB DDIG will be capped at $8,000 for his/her graduate career.

Travel Awards

These grants are used to defray expenses of students to attend professional meetings and workshops for additional training. The funds are normally reserved for students who (a) will present a paper or poster (b) are approaching the end of their graduate
career and thus need the opportunity to line up postdoctoral fellowships or other job opportunities and (c) attend a workshop, or some type of additional training. Cost matching by the Major Professor is encouraged, and may affect funding decisions. Travel awards are divided up into two categories:

1) Travel to present at meetings, which are capped at $2,000 for his/her graduate career.
2) Travel to attend a workshop or other type of training. These funds may be covered by a Start Up Grant or IB DDIG if the student has funds available in either of those categories, otherwise, travel award funds can be used, but those funds are still capped at the $2,000 total.

Fellowship Payments are Taxed

All fellowships are taxed. UT policy prohibits us from establishing a UT account with endowment funds, so they are paid directly to the student and therefore considered taxable income. If the student needs to pay for services with the University that will only allow them to pay directly from an account, then the student will have to write a check back to the department their PI resides. In most cases, this will be Integrative Biology(IB) or Molecular Biosciences (MBS).

Health Insurance Benefits

All GRA, TA and full fellowship recipients will be covered by either student health insurance, or faculty/staff health insurance. The type of health insurance the University will cover, depends on what type of funds you are paid from. A quick breakdown of most scenarios:

- TA and GRA appointments – faculty/staff health insurance
- Fellowships – typically student health insurance
- Spring TA, with a TA/GRA the following fall – faculty/staff health insurance
- Spring GRA with a summer GRA – staff/faculty
- Spring GRA with a summer fellowship – student health insurance

Both the student health and faculty/staff health insurance are considered gold plans under the Affordable Care Act. The plans are distributed by different departments, so every time a student has to switch, a new online health insurance enrollment form has to be completed. Human Resources processes the staff/faculty insurance, while
Student Health Services processes the student health insurance. Both of these links are on the graduate program website.

---

**Required Student Training**

UT requires all graduate students to take several trainings. Most are only once, but there are a couple you will have to do every two to three years. For those that require a refresher, you will receive a notification shortly before it is due.

The graduate program requires the following training to be taken by all graduate students. This is not a complete list. Depending on your research, you may be required to take additional short courses. You can find the link on our program website at [https://cns.utexas.edu/eeb-graduate-program/current-students/safety-training](https://cns.utexas.edu/eeb-graduate-program/current-students/safety-training).

**Ethics and Compliance Training**

Ethical conduct and compliance are personal responsibilities, and each student will be held accountable for his or her conduct and decision making. Our graduate program has a zero-tolerance policy regarding academic dishonesty and students found to be participating in any form of academic dishonesty will face immediate dismissal from the program. Academic dishonesty includes, but is not limited to, cheating, plagiarism, collusion, and falsification of data or records.

If you hold a position as a TA, GRA, or another position on any University campus or property, the State of Texas wants you to uphold certain ethical behaviors. Graduate students must be aware of and in compliance with state law and University policies related to sexual harassment, equal opportunity, human research, integrity, IT security, and so forth.

**Teaching Assistant Workshop**

The Biology Instructional Office requires completion of a teaching assistant (TA) workshop prior to serving as a TA. The workshop is typically on Friday, the week before classes start each fall and spring semester. Further details will be provided by the Biology Instructional Office prior to the first semester a student is to TA.

**Lab Safety Training**

- OH 101 Hazard Communication – general
- OH 201 Laboratory Safety
- OH 202 Hazardous Waste Management
- FF 205 Fire Extinguisher Use
• OH 238 Laboratory Safety Refresher (required every 3 years after Lab Safety)

-----------------------------

Crisis Procedures

EEB strives to provide a highly supportive environment to aid students through difficulties in the event of crises such as health problems (including mental health problems), assault, or professional conflict (e.g., with the Major Professor, or other students or postdocs). Students in need of advice or help may contact any member of the faculty or staff whom they feel comfortable talking to, but may also contact the Diversity & Inclusivity Committee (as mentioned above), the Graduate Advisor, the GSC Chair, PI or the Graduate Coordinator. Such discussions will be held in complete confidence and nothing will be disclosed unless the student specifically requests disclosure.

In the event of an urgent issue, students in need of assistance (especially those at risk to themselves) can use the contact list below to call for help immediately.

• Call 9-1-1 if you are hurt or in danger
• 24/7 UT Counseling and Mental Health Center Crisis Hot Line - 512-471-2255
• UT Counseling and Mental Health Center, Monday – Friday 8am – 5pm - 512-471-3515
• Student Emergency Services, Monday – Friday 8 am – 4 pm - 512-471-5017
• University Ombuds Office – Student Ombuds – 51-471-3825

For further information, you can visit the EEB website under the current student tab.
